- UI Policy conditional field
- Fare amount fields

- spModal popup dialog
- metro_qr_widget
- Optical gate turnstile

- sc_req_item backend
- Destination station exit
- User profile request list

Goals & Needs

"Help me..."
Primary motivation

"Help me avoid ticket booth queues so I can reach office on time."

"Help me pick my origin & destination with zero typing errors."

"Help me know exact single and return trip fares before paying."

"Help me get a clean, scannable digital pass for the gate scanner."

"Help me retain digital receipts for easy monthly expense tracking."

Positive Moments

- Delightful
- Convenient

Bypassing 30+ person physical queue directly using phone browser.

Pre-loaded station lists eliminating spelling or routing confusion.

Instant dynamic fare calculation without any page refresh delay.

Interactive modal popup with clear 250x250 QR opening gate in <1 sec.

Zero paper waste and organized travel log in ServiceNow user profile.

Negative Moments

- Frustrations
- Anxieties

Anxiety over missing train before figuring out the portal URL.

Mobile network latency while loading catalog item inside station.

Manually selecting "Others" requires extra field text typing.

Phone screen glare or low brightness causing turnstile scan retry.

Risk of closing browser window before pass is saved locally.

Opportunities

How might we improve each step?

Station floor QR codes that automatically open the /sp booking form with origin pre-selected.

Provide "One-Tap" favorite routes based on previous commute history logs.

Direct UPI intent integration for 1-click cashless checkout via payment gateways.

Auto-dispatch QR pass to WhatsApp / SMS so it is always ready even without internet.

Show monthly carbon footprint savings & loyalty reward points in commuter profile.
